

Follow the instructions below for JavaScript task.

1. Design screens Employees, Roles, Role Details, Add Employee and Role Employees screens using Html and CSS
2. When user clicks hamburger (arrow rounded with red color) side menu should be minimized.
3. When side menu is minimized Install update box at the bottom can be hidden.
4. In minimized mode, only menu icons should be visible.
5. When user clicks on Export, records visible on the screen should be exported to Excel or CSV.
6. User should be navigated to Add Employee screen, when he clicks on "Add Employee" button.
7. Emp. Id, First Name, Last Name, Email Id and Joining Dt are required fields.
8. Once a new user is added to the directory a successful message should be shown as shown in the mockups.
9. When user selects any alphabet, employees should be filtered whoever name starts with the selected alphabet and its color should be highlighted as shown in the mockup.
10. The filter icon should be in red, when any alphabet is selected. If search is not happening on alphabets, then filter (filter icon before the alphabets) color should be in black.
11. Below the alphabet section, there is filter area. Status, Location and Department are multi-select dropdowns. (Apply and Reset buttons should be activated/visible only when any of these dropdowns are selected.)
12. Whenever user selects Filters, Dropdown text should be 1 Selected/2 Selected etc.
13. In the Employees screen, the delete button should be enabled only when the user selects at least one employee record.
14. When user clicks on the ellipsis in each row, 3 options (View Details, Edit, Delete) should be shown.
15. When user clicks on table header, employee data should be sorted ascending and descending order.
